**INSECT-INSPIRED ROBOTS**

WVU researcher's creations could change space exploration, agriculture, mining

A West Virginia University engineer is combining the study of neuroscience and robotics to better understand the nervous system and motor output of insects to create animals-like robots for potential use in agriculture, mining and space exploration.

In order to create more mobile robots, Nicholas Szczecinski, assistant professor in the Department of Mechanical and Aerospace Engineering in the Statler College of Engineering, will investigate the force sensing abilities of insects and cockroaches, measure and respond to forces acting on their legs as they walk.

“Humans and other animals are graceful and agile, in part because they are very good at regulating the amount of force exerted when performing a task,” said Szczecinski. “However, most robots deployed in the field are not as good at regulating force, and many unnatural accidents have happened when people have been struck by robots with very high force exerted.”

With the aid of $300,000 award from the National Science Foundation, Szczecinski and computer investigators, Nadir Sharif from Marshall University, will work with a developed robot model whose central control system is based on the nervous system of an insect, enabling the researchers to integrate animal-force sensing into robotics.

According to Szczecinski robots with claws aren’t going anywhere anytime soon, however, when faced with difficult terrains like those found on the moon and Mars, robots with legs would enable sparsely equipped rovers to scale mountainous or canyon walls. And on Earth, robots with legs would enable robots to travel more directly and naturally on inclined terrains.

“With more sensitive and dynamic force sensing, robots may be better equipped to sense when they come in contact with people and limit their foot output to avoid hurting people,” said Szczecinski. “Both a simplicity to lead to robots that operate safely around people or even move people around, for example, in elder care.”

Szczecinski hopes that rather than involving multiple force sensors, insects of insects’ legs to measure the mechanical activity of the force sensed.$\int_0^1 x^2 \, dx$

The second approach will involve creating a detailed record of the activity of insect’s legs to measure the mechanical activity of the force sensed.$\int_0^1 x^2 \, dx$

The second approach will involve creating a detailed record of the activity of insect’s legs to measure the mechanical activity of the force sensed.$\int_0^1 x^2 \, dx$

UTLITIES
MUB issues boil water advisory

Some homes in the area near the West Virginia University校园 will have a boil water advisory in effect as of Monday, Oct. 18, 2021. This includes homes near the WVU Health Sciences campus and other areas. The WVU Health Sciences campus is a large area and it is important to verify with your local utility provider if you are affected.

At least one boil water advisory has been issued by the Morgantown Utility Board (MUB) in the area near the WVU Health Sciences campus. The advisory is in effect due to a recent water main break on the WVU campus. The boil water advisory is expected to last for at least 24 hours, and residents in the affected area are urged to boil all water used for consumption, cooking, or other purposes.

The boil water advisory affects homes near the WVU Health Sciences campus, including those near the WVU Rockefeller Neuroscience Institute, WVU Hospitals, and WVU Medicine. The advisory is expected to be in effect until further notice.

It is important to follow the boil water advisory guidelines to ensure the safety of your water supply. This includes boiling water for at least one minute before consuming it. If you are unsure whether your home is affected, contact the MUB at 1-800-995-6000 or visit the MUB website at mub.org for more information.

WVDE

The WVDE is taking steps to ensure a safe and healthy learning environment for students and staff. The WVDE has created a new “Healthy Learning Environment Task Force” to develop guidelines for reopening schools. The task force is made up of educators, parents, and community leaders. The goal of the task force is to develop a plan that ensures a safe and healthy learning environment for all students and staff.

The task force will consider factors such as social distancing, face masks, and cleaning and disinfecting procedures. The task force will also work with local health officials to develop guidelines for reopening schools.

The task force is expected to release its final report by the end of the month. The report will be used by school districts as they develop their own plans for reopening schools.

VACCINES

COVID-19 vaccine clinic

From 1 to 3 p.m. Friday, October 21, 2021, West Virginia University students and staff will have a COVID-19 vaccine clinic on campus. The clinic will be located in the WVU Rec Center, Room 102. The clinic is open to all students and staff, regardless of vaccination status.

The vaccine clinic will be staffed by qualified medical professionals. Students and staff will be asked to provide identification and proof of West Virginia University enrollment or employment. The vaccine will be administered by registered nurses.

Those who receive the vaccine will be required to stay for 15 minutes after receiving the shot to monitor for any adverse reactions. The vaccine is free and does not require insurance.

‘Halloween Kills’ carves out $50.4M at box office

Associated Press

‘Halloween Kills’ may be available to watch at home, but the latest installment in the Michael Myers saga is making a killing at the North American box office in its first weekend in theaters. The David Gordon Green-directed horror scared up $50.4 million from 3,705 locations, according to studio estimates Sunday.

‘Halloween Kills’ far surpassed expectations, which had the film pegged for a more conservative debut in the $30 million range. It also easily bested its main competition, which included the James Bond pic “No Time to Die,” in its second weekend, and Ridley Scott’s medieval epic “The Last Duel.” Both are playing exclusively in theaters.

The film picks up where Green’s 2018 “Halloween” left off, on the same bloody night, with Jamie Lee Curtis back as Laurie Strode.

Some were surprised when the studio made the decision to release “Halloween Kills” simultaneously in theaters and on NBC Universal’s Peacock for premium subscribers, but the day-and-date strategy does not seem to have hurt its box office haul.

“David Gordon Green crafted an incredibly terrifying continuation of this franchise that our core audience was more than eager to come out to the theater to see,” said Jim Orr, Universal’s head of domestic distribution. “Audiences want to be out, they want to be in theaters, and they want to experience it communally.”

Before “Halloween Kills,” which had a reported $20 million production budget, the biggest day-and-date opener of the year was Warner Bros.’ “Godzilla vs. Kong,” which grossed $32.2 million in its first weekend while also being available on HBO Max. It’s a best for a pandemic-era horror opening, narrowly besting out “A Quiet Place Part II.”

The 2018 “Halloween” was a massive hit that opened to $76.2 million and went on to gross north of $256 million against a $10 million budget.

**Cold weather on the water**

Bec Fleming

“Swim water temperatures are cooling down this fall, the United States Coast Guard and its Auxiliary are urging all boaters to stay safe as they do in the winter months. According to the United States Coast Guard’s 2020 Recreational Boating Statistics, cold-water immersion and hypothermia can be contributory factors in many boating-related fatalities. This increased risk as water temperatures decreases below normal body temperature, 96.8 degrees Fahrenheit. National Weather Service consistently ranks in the top five causes of boater deaths.

The U.S. Coast Guard’s Do’s and Don’ts of Cold Water Boating:

- Do make sure everyone is wearing a Coast Guard-approved life jacket. Even experienced swimmers will experience shock within one minute, hypothermia within an hour, and drowning within 10 minutes.
- Do file a float plan with someone that includes details of your boat, safe water, when you plan to return, and weather conditions.
- Do download a free float plan template at boatingaware.org.
- Do wear properly, always wear life vests, and be aware of all areas of cold water that you can get wet. Remember, dress for the water temperature, not the air temperature.
- Do use your navigational lights to alert other boaters to your presence in dark and/or foggy conditions.
- Do keep an eye on the weather, keep an eye on the weather, and keep an eye on the weather!

Bill Clinton released from California hospital

Bill Clinton received treatment for an infection in California. He will continue his recovery at home in New York, his spokesman said.

The former president, 75, was admitted to the hospital Sunday night after returning Sunday from a conference in Texas. He had been treated for an infection at a California hospital where he had been treated for an infection.

Clinton spokesman Angel Ureña said Saturday that Clinton was hospitalized in case his infection spread. But all health indicators were "trending in the right direction," Ureña said.

Hillary Clinton had been with her husband at the hospital and was accompanied there Saturday by daughter Chelsea.

President Joe Biden said Friday night that he had spoken to Bill Clinton, and the former president "sends his best.

"He’s doing fine," he said. Biden said during remarks at the University of Connecticut.

An aide to the former president said Clinton was undergoing a test that agreed to his blood to be sent to California for analysis and never went into septic shock, a potentially life-threatening condition.

The aide who spoke on the hospital on the condition his name wasn’t used, said Clinton was in an intensive care section of the hospital but wasn’t receiving IV fluids.

Bill Clinton was admitted to the hospital for an infection Saturday night after or right after returning from a conference in Tallahassee, Florida.

He has not had COVID-19, but he had been treated for an infection at a California hospital where he had been treated for an infection.

The aide who spoke on the hospital on the condition his name wasn’t used, said Clinton was in an intensive care section of the hospital but wasn’t receiving IV fluids.
Crisis gear gone from finely tuned global supply chain

By Wiley Malek

The internet has become our lifeline. Amid the ongoing pandemic, the digital realm has given us access to information, entertainment and banking functions. However, the digital infrastructure has been under increased strain as several high-profile recent events have underscored how vulnerable the web is to attacks. The internet is a critical infrastructure that has become more dependent on technology companies and service providers, making it more susceptible to cyber threats.

The internet is a complex network of interconnected computers and devices. It was designed to be resilient and flexible, allowing it to adapt to changes and failures. However, recent events have highlighted the fragility of this infrastructure. In June, Fastly Inc.'s content delivery network (CDN) service went down, leaving many websites inaccessible for several hours. This incident underscored the importance of having redundant systems and procedures in place to prevent such outages from impacting services.

In November, T-Mobile suffered a data breach, compromising the personal information of millions of customers. This incident raised concerns about the security measures in place to protect user data. It is crucial for companies to implement robust security measures to prevent such breaches from happening again.

The internet is a vital component of our daily lives, providing access to information, communication, and entertainment. As the internet continues to evolve, it is essential to maintain a balance between innovation and security. This will require a collaborative effort between governments, technology companies, and individuals to ensure the internet remains a safe and reliable platform for everyone.

The internet is a complex system consisting of billions of devices interconnected through a vast network of cables and servers. It is a critical component of our daily lives, providing access to information, communication, and entertainment.

Steelers beat Seahawks, Geno

Associated Press

Cincinnati moved up to No. 2 in the Associated Press college football poll Sunday, forcing five new teams to the rankings, and put five new unranked teams, increasing the total on the season to 47.

In each of the last three weeks, a top-10 team has lost to an unranked team, starting with Stanford over No. 3 Oregon on Oct. 2.

Purdue (4-2) entered No. 20 in the poll on early in the 2020 season. 

Blake Kugler: "It's our first game on the West Coast." 

The two teams played the final 3:39 of regulation and overtime without linebacker Jameson Ta- ger, who left on a stretcher and was taken to the hospital with an unspecified injury. Taylor fell to the ground during a third-down pass by the Bears. Taylor was attended to by medical staff. Players from both teams came to the aid of the injured starter.

NBC reported Taylor had a shoulder injury.

The Steelers weren't much of a threat after the half, either. Quarterback Kenny Pickett completed 19 of 31 passes for 219 yards, but it was hard for the offense to get much going.

The teams traded punts to start overtime. Watt, however, Hunted Smith to the middle of the field. Watt took the snap, rushed Smith's line and appeared to spike the ball.

The first 45 minutes was a defensive battle, with only 10 total plays between the two teams.

However, West Virginia found its footing late in the game. A 14-play, 84-yard drive, capped by a 5-yard flip to Harris gave the defense the Red Raiders on just one play on a goal and a pair of corner kicks in the opening 90 minutes. Despite a final Mostunser shot opportunity after an ensuing five-minute attack, the two teams returned to the locker room at 10:00.

Out of the half, the two teams shifted gears. West Virginia's defense continued to create chances throughout the rest of the half. With the defense the Red Raiders had one shot on goal and a pair of corner kicks in the opening 90 minutes. Despite a final Mon- taken out of bounds, putting the finisher Maya McCutcheon. Then, she added the finishing touch on her first career brace and the 2-0 victory.

The teams traded goals nine times and the Red Raiders unable to get a lead soon let the Seahawks take command of the second quarter and Pittsburgh offense. The Steelers weren't much of a threat after the half, either. Quarterback Kenny Pickett completed 19 of 31 passes for 219 yards, but it was hard for the offense to get much going.

NASCAR

NASCAR wins at Texas in 1st spot championship

From Page A-9

The tire rub eventually sent Hamlin spinning, triggering a big time loss. Top three teams in each division and two wild cards per conference advance to playoffs.

The Mountaineers will face the University of Virginia this weekend, after redshirt senior quarterback Will Grier announced his retirement last week.

The Mountaineers are the 5th-seeded team in the Big 12 Conference tournament, which begins Saturday.

Logano was on the outside with a number of playoff contenders leaving the race at Kansas and Martinsville with a week to go.

Trends, including car selection, pit crew analysis and brake pad wear, are key factors in determining the best finisher in the Cup Series.

We learn a lot from the first few races of the season, and we try to get them right the first time. It's a lot easier to make changes after you have the results.

NASCAR Cup Series Round of 8

Texas Motor Speedway is one of the toughest tracks on the calendar, and the Mountaineers have a lot of history there.

The Mountaineers finished the regular season ranked No. 9 in the country and No. 6 in the Big 12 Conference.

The Mountaineers are the 6th-ranked team in the final poll of the Associated Press coaches' poll, which was announced Monday.

The Mountaineers have a number of players ranked in the Top 25, including junior running back David Sills V, who is No. 3 in the country in rushing yards per game.

The Mountaineers have a number of players ranked in the Top 25, including senior running back David Sills V, who is No. 3 in the country in rushing yards per game.

Surgical comorbidities increase as people age

DEAR DOCTOR: Can you please talk about the risks to older patients with comorbidities when they’re going to have surgery? My name is Janice and I was told that I need a joint replacement surgery. It was done by a very good surgeon and at a good hospital, but she didn’t have the nerve to walk away. However, I’ve heard from friends that surgery offers an older adult the best chance at managing an existing medical issue. However, as you point out, not everyone is a good surgical candidate. This is because many are living with additional medical conditions known as comorbidities, that are not related to the issue the surgery is meant to address. These may include high blood pressure, impaired cardiac function, diabetes, kidney disease, chronic lung disease; COPD or emphysema; digestive disorders; depression; and diminished cognition, to name just a few.

Now that surgical patients 65 and older are at increased risk of postoperative complications, a longer hospital stay and slower recovery, another issue is whether the surgical equation is fragile. Frailty is often accompanied by two or more of the comorbidities we just discussed. All of this makes a thorough preoperative assessment for older adults necessary. It begins with establishing the patient’s goals relative to the surgery and weighing the rules of the procedure against the patient’s overall condition. When it comes to recovery, patients need both a realistic timeline and a detailed plan. Those with a robust social support network have been shown to have improved outcomes. And, while it seems grim to entertain worst-case scenarios, it’s crucial for any surgical patient, no matter their age, to make clear their wishes regarding life-saving measures and interventions.

Establish what you want and find out how to achieve peace of mind. A positive outlook will help you turn your dreams into a reality.

LIBRA (Sept. 23 - Oct. 22) — Someone will take advantage of you! Please be aware of someone asking for too much.

ARIES (March 21 - April 19) — Clip, get the facts, and ask and leave nothing to chance. A suggestion will help you update your book.

TAURUS (April 20 - May 20) — Go over personal documentation to be sure it is up-to-date and updated. Step outside your comfort zone.

GEMINI (May 21 - June 20) — Focus on what is important to you and your goals. A work-related matter will broaden your scope.

CANCER (June 21 - July 22) — Conclude the peace and cues of any obligation before you make a decision of any sort. An emotional issue will arise.

LEO (July 23 - Aug. 22) — Your determination and dedication will pay off. Discuss your plans with a good one.

VIRGO (Aug. 23 - Sept. 22) — Focus on taking care of your responsibilities.

LIBRA (Sept. 23 - Oct. 22) — Be diligent and a realistic approach will help you achieve and make arrangements to reach your goal.

SCORPIO (Oct. 23 - Nov. 21) — Someone will be pressuring you to avoid paying for something you don’t need.

SAGITTARIUS (Nov. 22 - Dec. 21) — Someone will rely on someone, you will miss out on something spectacular.

CAPRICORN (Dec. 22 - Jan. 19) — Be patient and understand that you have a good one.

AQUARIUS (Jan. 20 - Feb. 18) — Nothing to chance. Take care of personal matters yourself. A personal documentation to be sure it is up-to-date and updated.

PISCES (Feb. 19 - March 20) — Focus on what is important to you and your goals. A work-related matter will broaden your scope.

MISC. (March 21 - April 19) — Your determination and dedication will pay off. Discuss your plans with a good one.
